SUBJECT INDEX

Air quality for F^-
  in Texas, 151
  standards for USA, 143-152
  survey, 143-152
Alia ıine phosphatase, 37
Aluminum plant
  F^- emission, 18-21;42
Ammoniumsilicofluoride
  in pottery plant, 62, 63
Andhra Pradesh, 207
Angiography, 210
Arteries, calcified, 165

Blood urea nitrogen, 184
  pyruvic acid, 123
Bone, fluorosed
  ash content, 205
  morphology 175-180
  tensil strength, 205

Calcium, 189, 205
  depletion by fluoroacetate, 107
  diet in osteoporosis, 165
  effect on rooth growth, 107-108
  interaction with F^-, 37, 190
    fluoroacetate, 48
  kinetics, 176-180
Calcium gluconate, in HF burns, 200-203
Capillary sprouts, F^- induced, 172
"Chizzola" Maculae, 4-5
  pathology, 4
Contamination by F^- of
  air, 109-112
  food, 10
  forage, 54, 55
  fruit, 19
  grain, 19
  milk, 55
  plants, 23
  rainwater, 23
  trees, 28, 30
  vegetables, 19, 98
  vegetation, 18-21
  wheat, 140
Chlortrifluoroethylene (CTFE), 181-187
  acute lethality, 182
  delayed lethality, 183

Chlortrifluoroethylene (continued)
  effect on
    enzymes, 184
    heart, 185
    liver, 185, 186
    lung, 185
  lethal dose, 182, 183
  uses, 184
Copper, 51
Defluoridation
  equipment, 31-35
  of water in endemic fluorosis area, 31-35
Dental caries, statistics 71-79
Drinking habits in children, 13-15
Drosophila Melanogaster, 192-200

Electromicrogram
  liver, 186
  retina, 118
Electrolytes, 190
Electroretinogram, 115, 116
Endemic fluorosis, 207
Enzymes
  alkaline phosphatase, 209
  G-6-Pase, 122
  in CTFE poisoning, 183, 184
  lactic dehydrogenase, 124
  pyrophosphatase, 103
Experimental exposure to Flox, 160
Fluid intake in children, 14
Fluoridation, dental statistics, 71-79
Fluoride
  accumulation by forage crops, 40-41
  acute intoxication, 80-84, 102-103
    pathology, 81
    symptoms, 83
  analysis, 144
  content of
    air, 143-152
    beverages, 9, 17
    boiled food, 2
    bones, 10, 51, 167, 210
    bread, 7
    cabbage, 98
    citrus leaves and roots, 27-30
    coffee, 9
    fish, 7
    food, 1-3, 6-11

content of (continued)
fruit, 7, 10, 19, 20
gladiolus, 69, 137
grain, 19
grass, 10, 55
gypsum pond, 27
hair (cattle), 190
horn (cattle), 190
leaves, 139, 141
lilac bushes, 14
liver, 190
lung, 185
milk, 11
mineral water, 7, 41-42
muscle (cattle), 190
needles, 139, 141
ornamental trees, 38
parathyroid glands, 165
peas (polished), 6
rainwater, 22-26
rice (polished), 6, 7
roots (gladiolus), 70
rural air, 151
soft tissue, 51, 190
soil, 28, 29, 55, 98
talcum, 2
tea, 9, 12-18
trees, 10, 28, 38
trout, 8
urban air, 151
vegetables, 7, 10, 19
vegetation, 25, 26, 28
water, 164
distribution in bone, 168, 169
effect on
bones, 163
calcium absorption, 175, 179
cell growth, 162
children, 42
dental caries, 71-79
gladiolus, damage to, 66-71, 140
glass, 63
human health, 42
kidneys, 185
liver, 185
paradoxical, 205
plants, 137-142
poultry, 36-39
RNA (lentils), 153
effect on (continued)
RNase, 153-159
retina, 112-113
roses, 45
tree growth, 38, 142
wheat yield, 140
electrode, 144
intake
through food, 1-3, 8
through tea, 12-18
resorption and retention, 41-42
toxicity, 100-101
uptake from air, 1
from gypsum ponds, 97-99
from soil, 55
water, effect on
cut flowers, 45-46
Fluorine
inhalation experiment, 160-161
oxygen mixture, 161
pathology, 161
toxicity of inorganic compounds, 100
Fluoroacetate, 47, 102
calcium interaction, 47
growing roots, 107
in vegetation, 47
intoxication, human by, 102
mental disease, 102
Fluorocitrate, 47-48
in vegetation, 25, 26
Fluorosis, human, 105, 106, 208
autopsies, 209
blood in, 43
blood sugar in, 43
due to airborne F^-, 110-113
endemic, 105-106
ionizable F^- in, 13
phagocytes in, 43
Fluorosis, skeletal, 208
autopsies in, 209
bone pathology in, 170, 172-174
capillary sprouts, 172
cervical spine in, 92
in India, 105, 106, 208
microradiography, 168-174, 206
morphology, 176
paraplegia in, 208
sampling of specimens, 174
Fractures, NaF therapy, 164

Fumigation
drosophila, 192-200
fluorine, 160
hydrogen fluoride, 40, 66
sulphuryl fluoride, 85-91
Funduscopy in NaF induced retinitis, 115

Gladiolus, F^- damage to, 66-71, 140
Glass, etched by F^-, 63
Growth inhibition of F^-, 38, 107
Gypsum as fertilizer, 98
Gypsum pond dyke break, 27-30
F^- in pond water, 27
phosphates in pond water, 27
Hair (cattle), 190, 191
Heart, in F^- poisoning, 81, 185
Horn (cattle), 190
Hydrogen fluoride
burns, 200-203
effect on grass, clover, 50
fumigation with, 192-200
genetic effects, 192-200
intermittent exposure to, 40

Inhalation of
chlortrifluoroethylene, 181-187
Inhibition of growth, 38, 142
Insect eggs, exposed to, 86-89
insulin, in fussol poisoning, 124
Intoxication by F^-
acute, 80-94
fluoroacetate in humans, 102
Iodine, interaction with F^-, 36
Iron, 52

Kidney (Nissol poisoning), 183-185

Liver
damage in,
CTFE poisoning, 185, 186
Nissol poisoning, 183-185
sodiumsilicofluoride, 80, 82, 185
fluoride content of, 190
Lung, 185

Magnesium, interaction with F^-, 37, 51, 103
Malformation in flies, 195
Manganese
interaction with F^-, 49-52
Microradiography
fluorosed bone, 167-174, 204-207, 209, 211

Nephrosis in
CTFE poisoning, 184
Nissol, organofluoride, 102-122
Nitrogen, 184
North Dakota survey, 164

Ophthalmoscopy
NaF treatment, 210
Organofluoride intoxication, 121-136
experimental
electroencephalogram, 133-134
heart, 121-136
metabolism in, 121-136
human, 134, 136
pathology, 132-133
serum electrolytes, 128-130
serum enzymes, 128, 129
pyruvic acid, 123
Osteoporosis
alkaline phosphatase, 209
calcium, 204, 209
Ca/P ratio, 205
densitometry in, 206
experimental, 204
induction of, 165, 204
microradiogram, 167-174, 206, 211
phosphorus, 204

Paradoxical effect of F^-, 205
Parathyroid glands, 165
Perlit bricks, 80
Phenylmethylsulfonylfluoride
acetylcholinesterase, 43
action by trypsin, 43
Phosphate fertilizer plant, 27-30
F^- wastes from, 27
Phosphorus, interaction with F^-, 37, 189, 205
Potassium, interaction with F^-, 190
Pottery, F^- release, 62
Poultry, F^- in nutrition of, 36-39
growth reduction by NaF, 37

Precipitation, effect on
forage contamination, 57
Pyrophosphatase
F^- effect on, 103-105
Pyruvic acid, 123

Rainwater, F^- in, 22-26, 56, 57, 58
seasonal variations, 23
determination of, 23
near factories, 24, 25
Retinitis experimental, 114-120, 210
due to F^-, 112
electromicroscopy, 118, 186
fluorescin angiography in, 119
RNA in lentil root, 153
in CTFE poisoning, 185
RNase activity in lentils, 153-159
Rockphosphate, F^-
contamination by, 36
Roots
gladiolus, 70
wheat, 107
Season effect on
F^- in rainwater, 23
forage contamination, 57
Skeletal fluorosis
bone resorption in, 180
calcium absorption in, 179
neurological complications, 91-96
Sodium fluoride
bone, topical application, 106
effect on electrolytes, 187
retina, 114-120, 210
RNA in lentil roots, 153
Sodiumsilicofluoride
suicide poisoning, 80-84
Sodium interaction with F^-, 190
Soft tissue, F^- content, 190
Statistics, dental caries, 71-79
Stomach, in F^- poisoning, 81
Sulfur oxides, related to F^-
in vegetation, 139
Sulfuryl fluoride, 85-91

Tea consumption in
children, 15
United Kingdom, 15
Threshold limits for F^-, 53-60
in cattle, 188
Tolerance to F_2, 161
Trees, growth inhibition by F^-, 38, 142

Variation in F^- content, 1
Vikane, 85

Wheat, 140
Wheat roots, 107-108
